Protect Your Network, Devices and Data from Cyber Threats

In a data-driven mobile world, there are serious security threats everywhere. Stolen devices, data theft, ransomware, transaction fraud, software vulnerabilities, cloud hacks — the list only gets longer.

Stolen Devices

Cloud Hacks

Data Theft

Ransomware

Software Vulnerabilities

Transaction Fraud

Given the growing complexity of networks and the increasing sophistication of security threats, Lenovo believes that a 360° approach to security is essential.

Software Security Solutions

Absolute: the Lost & Found service combines Absolute's software and Lenovo's security tools with additional alerts that make it easy to return missing PCs to their registered owners. Absolute's software tracks the stolen computer and provides local police with the information they need to get it back.

Lenovo Unified Workspace: Lenovo Unified Workspace enables organizations to securely deliver the right apps and content, to the right users – anytime, anywhere on any device. This gives your workforce the flexibility, policies and tools to be more creative, productive and collaborative.

Security Services

Online Data Backup (OLDB): a simple, automatic and secure cloud backup solution. The crucial task of backing up data can be an exigent and an expensive endeavor, especially for larger businesses. And only backing up the data isn't enough. Having the flexibility to access it whenever you want is also an essential factor.

Keep Your Drive (KYD): allows you to keep your Lenovo drive and data within your custody, improving security and potentially alleviating civil liability risks. It lets you dispose off business data on your terms and helps your organization avoid the legal and monetary consequences associated with a breach of data security.

Product End-of-Life Management (PELM): the reuse, refurbishing, demanufacturing, dismantling, reclamation, shredding, recycling, treatment and disposal of products, parts, and options when they are taken out of service, reach end of life, and/or scrapped. This ensures that personal data or corporate data never falls into the wrong hands.

Encryption Services: hard drive encryption is essential to avoid unauthorized access to data and sophisticated attacks. Lenovo uses the highest level of software-based data encryption to encrypt all user data to the PC automatically.
