Lenovo Sustainability Solutions

Maximize circularity in manufacturing with secure Asset Recovery.

71% of manufacturers strongly believe that environmental sustainability is core to their organization's ability to create value[1].

While many manufacturers need to rethink how they inherently design, manufacture and ship their products to become more circular, it is also important to consider how retiring and end-of-life IT assets can be reused, refurbished and recycled in an environmentally conscious way.

One-stop solution for secure IT lifecycle management

Introducing **Lenovo Asset Recovery Services** (ARS) an end-to-end service to help mitigate the environmental impact and data security risks associated with end-of-life IT asset disposal.

Our team of ARS experts will work with you to create a full lifecycle planning strategy that encourages the reuse, refurbishment, and recycling of your IT hardware. We keep data security at the heart of our asset recovery service and use industry recognized data sanitization standards such as **NIST SP 800-88** to ensure secure data disposal of your IT assets.

Lenovo

Minimize the environmental impact of end-of-life IT assets.

At Lenovo, our Asset Recovery Services (ARS) team are building processes with our partners to maximize the reuse potential of IT assets globally. We follow the hierarchy of reuse first, then recycle. After the secure data sanitization of your assets, IT parts that are still in good shape can be harvested for reuse, refurbish devices in good shape, and recycle those devices that are too old or damaged.

By working with industry leading ITAD partners, we can also help unlock any potential residual value from your decommissioned equipment. You can use this to offset some costs of a technology refresh and simplify the transition from old to new.

Our services **cover all technology brands and hardware types including servers, storage, networking, PCs, cell phones, and more.**

Flexible options to meet your unique needs

Lenovo Asset Recovery Services offer flexible asset and data disposition options to suit your organization's needs.

Standard Asset Recovery Services

- Pickup and securely transport devices from your location
- Process after collection, then test and prepare equipment for resale
- Recycling to ensure proper disposal for obsolete equipment
- NIST 800-88 compliant data sanitization and disk destruction
- Lenovo as your single point of contact for detailed reporting
- Return value to the customer for re-marketable assets

Additional on-request Services

- Remote or on-site discovery to provide Fair Market Value for current inventory
- Dismantle and move assets to on-site pickup area
- Quarantine hold of assets to ensure data migration
- On-site data destruction

Other options

- Refurbishment and remarketing
- Recycling of components
- Donation to the organization of your choice

Rely on Lenovo for best-practice IT hardware recycling and secure data disposal that's efficient, environmentally conscious, and legally compliant.
