Improving quality of care with **collaborative** teamwork

Meaningful interactions and collaborative relationships are essential to delivering exceptional patient care.

Collaboration among healthcare professionals, patients, and family members leads to improved outcomes and quality of care through better cooperation, information sharing, coordination, and decision making. In the modern healthcare delivery and research environments, collaboration takes place in a variety of settings — in-person, virtual, and hybrid — and technology creates the bridge for a seamless team experience anywhere.

Lenovo Health solutions power continuous collaboration to enable virtual health, enhance team communication, and support medical research activities. Our mission is to respond to the evolving needs of healthcare and pioneer the hybrid future for patient-first organizations with people-first technology. Lenovo's made-for-healthcare collaboration solutions are designed to support the quadruple aim of improving patient and caregiver experiences, decreasing costs, enhancing the work life of providers, and increasing access to care.

Lenovo ThinkSmart solutions for **smarter** collaboration

Lenovo's industry-leading technology lays the groundwork for collaboration with versatile, flexible solutions that combine enterprise-class performance with the connectivity that clinical and research environments demand. ThinkSmart solutions can help:

- Improve collaboration spaces with immersive experiences anywhere
- Seamlessly power hybrid meetings, research collaboration, specialist consultations, and training programs
- Keep patients connected with family members and their care team

The Lenovo ThinkSmart family of collaboration solutions drives modernization forward for healthcare organizations that want to embrace hybrid care delivery models.

- **Lenovo ThinkSmart View Plus:** a built-for-collaboration device with a 27-inch touch display and flexible mounting options
- **Lenovo ThinkSmart One with Controller:** an integrated collaboration bar ideal for small and medium-sized rooms
- **Lenovo ThinkSmart Core Full Room Kit:** a flexible solution designed to support any space, from huddle rooms to large conference rooms

Flexible options for in-room patient consultations

Hospitals are embracing virtual health models, which offer flexibility and convenience for clinicians while connecting them with their patients from anywhere.

ThinkSmart collaboration solutions facilitate access to a wider care team, allowing providers to maintain face-to-face relationships with patients — no matter the distance. Clinicians, such as mental health providers, can offer new lines of service by meeting with patients and care teams in unconventional spaces like a school or emergency department. Virtual consultations also help physicians and specialists save valuable time, boost productivity, and improve clinical efficiency while maintaining continuity and trust with patients.

SPOTLIGHT ON ThinkSmart View Plus

Touch display with multiple mode functionality — Microsoft Teams Display, peripheral mode, and monitor mode — and stylus pen for whiteboarding

Flexible mounting options — mount on a patient room wall or wheel it in on a mobile medical cart to move between rooms, taking advantage of easy portability and cost savings

Built-in security features, including AI for facial recognition

Multiple opportunities

for interprofessional collaboration

Collaborative practices enhance patient-centered care delivery by enabling a team-based approach — creating customized treatment plans, improving quality of care, and increasing patient engagement.

Lenovo ThinkSmart solutions enable collaborative teamwork for clinicians and health researchers anywhere with high-quality video and audio, built-in security features, and a consistent user experience across devices.

- Use ThinkSmart View Plus to join Teams meetings and connect with colleagues face-to-face with one click — whether they're across town or across the globe
- Create an immersive space where everyone is fully engaged while working together virtually with ThinkSmart One with Controller
- Power smarter collaboration technology in meeting rooms of all sizes with ThinkSmart Core with Controller

SPOTLIGHT ON

ThinkSmart One with Controller

- The world's first Windows-based collaboration bar — instantly transforming small and medium-sized rooms into dynamic and engaging meeting spaces with the touch of a button
- Simple, intuitive meeting controls provided by either the ThinkSmart Controller or the Lenovo IP Controller
- Pre-loaded with ThinkSmart Manager software for remote manageability and proactive monitoring

Enhanced **patient connections** with family

Engaging family members as partners in a patient's care helps improve the quality of care and greatly benefits the recovery process. Collaboration technology keeps patients connected with their loved ones regardless of distance, helping improve outcomes. With Lenovo ThinkSmart View Plus and Lenovo ThinkSmart One with Controller, hospitals and outpatient facilities can empower these connections — enhancing the experience for both patients and families.

Studies have shown that keeping patients and family members engaged improves the patients' care ratings in satisfaction surveys, has a positive effect on pain control and emotional health, and creates a competitive edge for hospitals.

Flexible workplace models allow clinicians and medical researchers to be productive in their preferred environments

— increasing their job satisfaction and potentially reducing burnout.

ThinkSmart collaboration solutions scale to your space to:

- Facilitate department meetings and research collaboration for a hybrid workforce
- Support graphics-intensive training for areas such as radiology, pathology, and digital twins
- Power large meeting rooms for presentations

With features such as AI-enhanced video and audio, whiteboarding, and built-in compute, ThinkSmart technology ensures that remote participants feel equally engaged.

SPOTLIGHT ON

ThinkSmart Core with Controller

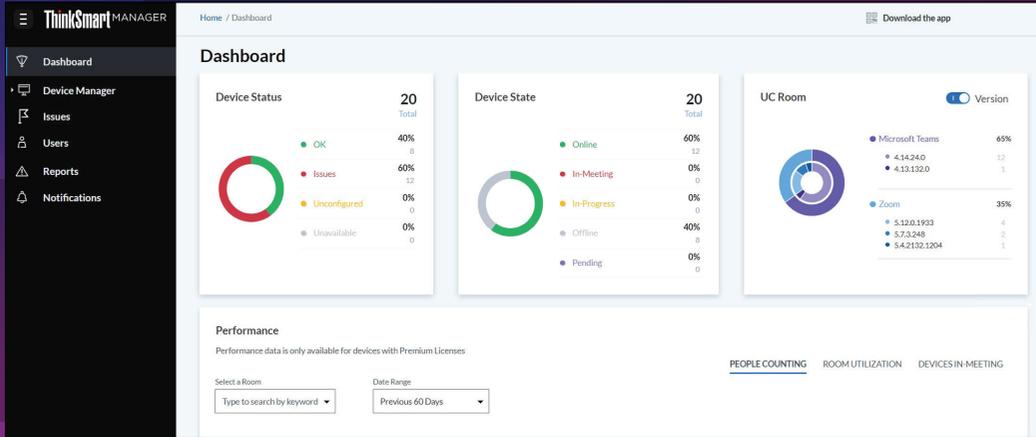

- Power any scalable, flexible, and complete modular solution with ThinkSmart Core for any room size or configuration
- Integrate ThinkSmart Core with Controller to your existing audiovisual equipment or standardize rooms with the ThinkSmart Core Full Room Kit, which includes ThinkSmart Cam — Lenovo's first AI camera — and ThinkSmart Bar for premium audio
- Pre-loaded with ThinkSmart Manager software for remote manageability and proactive monitoring
- Simple, intuitive meeting controls provided by either the ThinkSmart Controller or the Lenovo IP Controller

Seamless hybrid meetings, research collaboration, and clinician instruction

Lenovo

Support the hybrid workforce with better monitoring and greater control

The benefits of ThinkSmart Manager for IT teams include:

- Using a single pane of glass for deploying, managing, configuring, updating, and troubleshooting devices remotely
- Streamlining actions across the entire fleet of ThinkSmart collaboration devices
- Receiving immediate, real-time notification of issues — even before employees report them

Simplified device control with **ThinkSmart Manager**

Like clinicians and health scientists, IT professionals need the flexibility to work from anywhere. Lenovo ThinkSmart Manager enables IT operations teams to manage the complex needs of hybrid collaboration environments without adding to their workloads or requiring them to go to the office.

With ThinkSmart Manager and the Intel vPro® platform, IT can:

- Access, update, and control ThinkSmart devices remotely, even when they're powered off or unresponsive
- Perform bulk configuration management, as well as rotate BIOS, Windows, and Microsoft Teams passwords
- See real-time device status and register new devices with the ThinkSmart Manager Android or iOS mobile app

Choose your solution

Purpose-built for collaboration,

Lenovo ThinkSmart solutions enable healthcare organizations to rethink their workplaces, coordinate from anywhere, and embrace hybrid care delivery models.

ThinkSmart View Plus
